Deep Query Ask

Case Management

1 . Project Overview :

Project Name: Customer Support Case Management **Salesforce Cloud**

Used: Service Cloud

Role Focus: Salesforce Business Analyst The organization wants to modernize and standardize how customer complaints and support requests are handled by implementing Salesforce Service Cloud as a centralized support system.

Problem Statement (AS-IS State)

Description

The company currently manages customer support requests in a manual and unstructured manner using emails, phone calls, and Excel sheets. There is no centralized system to track customer complaints, resulting in delayed responses, inconsistent follow-ups, and poor visibility into case status.

Support agents lack a structured workflow, and management has no real-time insights into service performance. This negatively impacts customer satisfaction and operational efficiency.

AS-IS Business Issues

Description

Customer complaints received via email and phone calls

Support team manually tracks cases in spreadsheets
No centralized case management system
No SLA tracking or escalation process
Customers repeatedly follow up for status updates
No visibility into open or overdue cases
Difficult to measure agent workload and performance
No historical data for audits or analysis

Business Impact (AS-IS)

Description

Delayed case resolution
Poor customer experience and satisfaction
Increased workload for support agents
Inconsistent handling of customer issues
No performance metrics for management
Decisions based on assumptions instead of data
Risk of SLA breaches and compliance issues

Business Objectives (TO-BE State)

Description

The objective of this project is to implement Salesforce Service Cloud to standardize and automate customer support operations.

Key Objectives

Capture all customer complaints in a single system
Automate case creation and assignment
Track case lifecycle from creation to closure
Monitor SLAs and resolution timelines
Improve communication with customers
Provide real-time visibility through reports and dashboards
Measure agent productivity and service quality
Improve overall customer satisfaction

Scope Definition (BA View)

Description

In Scope (Salesforce)

Case creation (Email-to-Case / Web-to-Case)

Case assignment rules

Case lifecycle management

SLA tracking using Entitlements

Case escalation rules

Reports and dashboards

Out of Scope

Telephony (CTI) integration

Chatbot or AI-based support

ERP or billing system integration

Knowledge base automation (optional future phase)

AS-IS vs TO-BE Comparison

Description

Area	As-Is	To BE
Case Tracking	Excel & Emails	Salesforce Cases
Assignment	Manual	Automated
SLA Tracking	Not available	Salesforce Entitlements
Customer Updates	Manual follow ups	Automated
Reporting	None	Real-time dashboards
Agent performance	Not measurable	Data-driven metrics

TO-BE Process Flow (Future State)

Description

Customer submits issue via email or web form

Case is automatically created in Salesforce

Case is assigned to the appropriate support agent

Agent works on the case and updates status

Customer receives status notifications
SLA is monitored throughout the lifecycle
Case is resolved and closed
Management reviews reports and dashboards

Data Model (Logical – BA View)

Description

Object	Purpose
Account	Represents customer organization
Contact	Represents customer individual
Case	Tracks customer complaints/support requests
Case Comment	Stores communication updates
Case History	Track status and ownership change
Entitlement	Defines SLA rules
Case Milestone	Tracks SLA milestone
User	Support Agents

Data Relationships

Account– Contact
Account– Case
Contact– Case
Case– Entitlement
Case– Case Milestones

FUNCTIONAL REQUIREMENTS DOCUMENT (FRD)

FRD Purpose

This FRD translates the approved business requirements into functional system behavior and maps each requirement to Salesforce configuration or functionality.

FRD principle: What the system should do → Salesforce component → expected result → test scenario.

Solution Overview

Business Requirement → Functional Requirement → Salesforce Component
→ Configuration → Testing → Business Result

Business Need

Salesforce Solution

Business Need

Salesforce Solution

Centralized support cases

Case Object

Issue categorization

Case Type field

Urgency

Priority field

Customer channel

Origin + Web-to-Case / Email-to-Case

Automatic routing

Flow / Assignment Logic + Queues

Lifecycle tracking

Case Status

Access control

Profiles / Permission Sets / Sharing / Field Access

Management visibility

Reports & Dashboards

Functional Requirements

FR-01 — Case Creation

Requirement: Authorized support users should be able to create a Case with required customer and issue information.

Salesforce Component: Case Object

Configuration / Data: Subject, Description, Case Type, Priority, Origin, Account, Contact, Owner.

Expected Result: A Case is created successfully with required information.

FR-02 — Case Categorization

Requirement: The system should categorize Cases according to the customer issue.

Salesforce Component: Case Type field

Configuration / Data: Technical Issue, Billing Complaint, General Inquiry.
Expected Result: Case can be categorized consistently.

FR-03 — Priority Management

Requirement: Support users should be able to identify urgency.

Salesforce Component: Priority field

Configuration / Data: High, Medium, Low.

Expected Result: Priority is visible and reportable.

FR-04 — Case Origin

Requirement: The system should identify the channel through which the case originated.

Salesforce Component: Origin field

Configuration / Data: Email, Phone, Web

Expected Result: Origin is captured consistently.

FR-05 — Automatic Case Assignment

Requirement: New Cases should be routed to the appropriate support queue based on Case Type.

Salesforce Component: Record-Triggered Flow + Queues

Configuration / Data: Decision outcomes for Technical, Billing and General.

Expected Result: Owner/routing is set according to business rule.

FR-06 — Web-to-Case

Requirement: A customer website support submission should create a Salesforce Case.

Salesforce Component: Web-to-Case

Configuration / Data: Required form fields and default values as applicable.

Expected Result: Web submission creates a Case.

FR-07 — Email-to-Case

Requirement: Customer support emails should be captured as Salesforce Cases where configured.

Salesforce Component: Email-to-Case

Configuration / Data: Routing/service configuration.

Expected Result: Email creates a Case.

FR-08 — Case Status / Lifecycle

Requirement: Support users should track Case progress.

Salesforce Component: Case Status

Configuration / Data: Use approved org values; e.g. New, Working, Escalated, Closed.

Expected Result: Progress is visible and reportable.

FR-09 — Security & Access

Requirement: Users should only access Case data required for their role.

Salesforce Component: Profiles / Permission Sets / Sharing / Field Access

Configuration / Data: Role-based access design.

Expected Result: Access follows approved security rules.

FR-10 — Reporting & Dashboard

Requirement: Management should have visibility into support operations.

Salesforce Component: Reports & Dashboards

Configuration / Data: Status, Priority, Type, Origin, Owner/Queue and open/closed metrics.

Expected Result: Required management metrics are available.

16. Detailed Flow Specification

Element	Configuration / Logic
Start	Record-Triggered Flow on Case
Trigger	When a record is created for the initial demo
Decision	Determine Case Type
Outcome 1	Case Type = Technical Issue
Outcome 2	Case Type = Billing Complaint
Outcome 3	Case Type = General Inquiry
Action	Set/route Case Owner to corresponding Queue
Default	Other Case Type / no routing, as define
End	Flow completes after routing

Data / Field Specification

Field	Purpose	Suggested Values
Case Type General Inquiry	Issue categorization	Technical Issue; Billing Complaint;
Priority	Urgency	High; Medium; Low
Status Working; Escalated; Closed	Lifecycle	Use approved org values; e.g. New;

Origin	Request channel	Email; Phone; Web
Subject	Short summary	Customer issue summary
Description	Detailed issue	Customer issue details
Account	Customer organization	Related Account
Contact	Customer contact	Related Contact
Owner	Case ownership	User or Case Queue

Acceptance Criteria

ID	Acceptance Criteria
AC-01	Authorized user can create a Case with required information.
AC-02	Case Type values are available and consistently used.
AC-03	Priority identifies urgency.
AC-04	Technical Issue routes to Technical Support Queue.
AC-05	Billing Complaint routes to Billing Support Queue.
AC-06	General Inquiry routes to General Support Queue.
AC-07	Configured web submission creates a Case.
AC-08	Configured email submission creates a Case.
AC-09	Case status can be updated through its lifecycle.
AC-10	Reports provide required management visibility.

19. Test Scenarios / Test Cases

Test ID	Scenario	Expected Result
---------	----------	-----------------

TC-01	Create normal Case	Case is created successfully
TC-02	Create Technical Issue	Technical queue/routing applied
TC-03	Create Billing Complaint	Billing queue/routing applied
TC-04	Create General Inquiry	General queue/routing applied
TC-05	Submit Web-to-Case	Case created in Salesforce
TC-06	Send support email	Case created if Email-to-Case is configured
TC-07	Update Case Status	Status changes successfully
TC-08	Check user access	Access follows security requirement
TC-09	Open report	Expected cases/metrics displayed

Requirement Traceability Matrix (RTM)

BRD	FRD	Salesforce Solution	Test
BR-01	FR-01	Case Object	TC-01
BR-02	FR-02	Case Type	TC-02
BR-03	FR-03	Priority	TC-03
BR-04	FR-05	Flow + Queues	TC-02/03/04
BR-05	FR-06/07	Web-to-Case / Email-to-Case	TC-05/06
BR-06	FR-08	Case Status	TC-07
BR-07	FR-09	Security Model	TC-08
BR-08	FR-10	Reports/Dashboard	TC-09

1. Final BA Presentation Mapping

Problem → BRD → Requirements → FRD → TO-BE Flow → Salesforce Configuration → Working Flow → Test Result →

Business Benefit

Presentation line: "I first documented the business problem and requirements in the BRD. I then translated

those requirements into functional specifications in the FRD and mapped them to Salesforce capabilities.

Finally, I configured and tested the solution."

22. Final Project Outcome

- Centralized customer Case management
- Standardized case categorization and priority
- Improved case routing
- Better case lifecycle visibility
- Multiple intake channels where configured
- Role-based access design
- Improved reporting and management visibility

23. Finalization Note

This BRD/FRD is a professional demo-project baseline. Before final submission, replace assumptions with

the exact requirements agreed for your project and verify every Salesforce configuration in your own org.

Salesforce screen labels can vary by org/release.

BR-01 — Centralized Case Management

Business Requirement:

The business requires a centralized Salesforce Service Cloud solution to capture, manage, track, and resolve customer support requests.

Business Benefit:

All customer issues can be managed from one centralized system.

BR-02 — Email-to-Case

Business Requirement:

The business requires customer emails to be automatically converted into Salesforce Cases.

Business Benefit:

Reduces manual Case creation and ensures customer emails are captured systematically.

Your Salesforce Implementation:

Customer

Email

Email-to-Case

Salesforce Case

BR-03 — Case Categorization

Business Requirement:

The business requires Cases to be categorized according to the customer's issue.

Example categories:

Technical Issue

Billing Complaint

General Inquiry

Salesforce: Case Type Picklist

BR-04 — Automatic Case Assignment

Business Requirement:

The business requires Cases to be automatically assigned to the appropriate support Queue based on defined business rules.

Example:

Technical Issue

Technical Support Queue

Billing Complaint

Billing Support Queue

General Inquiry

General Support Queue

Salesforce: Case Assignment Rule / Flow + Queues

BR-05 — Automatic Customer Response

Business Requirement:

The business requires customers to receive an automatic confirmation after a Case is created from their email.

Example:

Customer Email

Case Created

Auto Response

Customer receives confirmation

Salesforce: Case Auto-Response Rule + Lightning Email Template

BR-06 — Case Priority

Business Requirement:

The business requires Cases to be prioritized according to urgency.

Example:

High
Medium
Low

Salesforce: Case Priority field

BR-07 — Case Lifecycle

Business Requirement:

The business requires support agents to track Cases throughout their lifecycle.

Example:

New

Working

Escalated

Resolved

Closed

BR-08 — Security

Business Requirement:

The business requires customer and Case information to be accessible only to authorized users according to their responsibilities.

Salesforce: Profiles, Permission Sets, Roles, Sharing Settings, Object/Field permissions.

BR-09 — Reports & Dashboard

Business Requirement:

The business requires management reports and dashboards to monitor customer-support operations.

Reports can include:

Cases by Status
Cases by Priority
Cases by Type

Cases by Origin
Cases by Owner
Open vs Closed Cases

Milestone Breakdown (BA-Driven)

Description

Milestone Breakdown (BA-Driven) is a structured approach used by a Salesforce Business Analyst to divide a project into logical, manageable phases based on business goals rather than technical implementation steps.

Each milestone represents a business outcome that the Salesforce solution must achieve. The Business Analyst defines *what* needs to be accomplished at each stage, *why* it is needed from a business perspective, and *how success will be measured*. Technical teams (Admins/Developers) then implement the solution based on these defined milestones.

Salesforce BA Foundation (Account & Navigation)

Introduction

Are you new to Salesforce and the **Business Analyst role**?

Not sure how Salesforce supports business processes or where a BA should start?

This milestone introduces **Salesforce from a Business Analyst perspective**.

You will learn **what Salesforce is**, how to access it, and how a BA explores Salesforce—not to code, but to **understand business data, processes, and users**.

What Is Salesforce? (BA Perspective)

Salesforce is a **customer success platform** that helps organizations:

- Manage customer data
- Automate business processes
- Improve sales and service efficiency
- Provide insights through reports and dashboards

As a **Salesforce Business Analyst**, your role is to:

- Understand business needs
- Map them to Salesforce features
- Ensure Salesforce supports business outcomes

Milestone Objective (For BA)

By the end of this milestone, students will:

- Create a Salesforce Developer account
- Access Salesforce Setup
- Understand Salesforce UI from a BA point of view
- Identify where business data and processes live.

Activity 1: Creating Developer Account: Creating a developer org in salesforce.

1. Go to <https://developer.salesforce.com/signup>
2. On the sign-up form, enter the following details:

Build for the Agentic Enterprise. Sign up for your Developer Edition.

The entire Salesforce platform - exposed as APIs, MCP tools, and CLI commands. Build apps, ship agents, and let coding agents do the heavy lifting with Salesforce Headless 360.

- Build AI agents with Agentforce, grounded in your data with Data 360
- Connect Claude Code, Cursor, or Codex to your org with hosted MCP
- Build in the browser with the Agentforce Vibes IDE - no setup required
- Drag-and-drop when you want it, Apex when you need it
- 60+ MCP tools and 30+ coding skills, ready out of the box

Sign up for your Developer Edition

A free Salesforce Platform environment with Agentforce and Data 360

Job title: Business Analyst ✓ Country/region: India ✓

State/province: Rajasthan ✓ Work email: lkharekha9@gmail.com ✓

☐ I agree to the [Main Services Agreement](#), [Developer Services](#), [Salesforce Program Agreement](#), and [B2B Terms of Service](#)

Your free trial may be provisioned on or migrated to Hyperforce, Salesforce's public cloud infrastructure.

I acknowledge, as described in the Developer Documentation: (1) the Developer Edition includes autonomous and other generative AI features; and (2) Salesforce may limit use of those features and the org, and may terminate any org that has been inactive for 60 days.

We value your privacy. To learn more, visit our [Privacy Statement](#).

Sign me up

1. First Name-
2. Email-
3. Job Title-
4. Company-
5. Country-

Activity 2: Account Activation

1. Go to the inbox of the email that you used while signing up. Click on the verify account to activate your account. The email may take 10-30mins and sometimes 2 hours.

2. Click on Verify Account 3. Give a password and answer a security question and click on change password.

A screenshot of the "Change Your Password" form. The title is "Change Your Password". Below it, it says "Enter a new password for lead@sb.com. Make sure to include at least:" followed by three requirements: "8 characters", "1 letter", and "1 number", each with a green checkmark. The form contains several input fields: "New Password" (with a "Good" status), "Confirm New Password" (with a "Match" status), "Security Question" (a dropdown menu showing "In what city were you born?"), and "Answer" (containing the text "asdfghjkl"). A red rectangular box highlights the "New Password", "Confirm New Password", "Security Question", "Answer", and the "Change Password" button at the bottom.

4. Then you will redirect to your salesforce setup page.

Milestone 2: Salesforce Service Cloud Foundation

Objective: Understand Service Cloud features and navigation from a BA perspective.

BA Activities

- Understand Case object
- Identify support process requirements
- Review standard Service Cloud capabilities Deliverable
- Process understanding document

Milestone 2: Case Object & Fields

Objective: Ensure required business data is captured.

BA Activities

- Identify required case fields:
 - Case Type
 - Priority
 - Status
 - Origin
 - Description

Case Information

Case Owner Saniya Lakhara	* Status New
Case Number	Priority Medium
Contact Name Search Contacts...	* Case Origin --None--
Account Name Search Accounts...	
Type --None--	
Case Reason --None--	

Web Information

☐ Assign using active assignment rule

Web Company

Cancel Save & New Save

Milestone 3: Case Creation Channels

Objective: Capture cases from multiple channels.

BA Activities

- Define case intake channels:
 - Email-to-Case
 - Web-to-Case
- Define default values and ownership Deliverable
- Case creation flow diagram

Activity 1 : Create Email to Case

Email-to-Case allows customer emails sent to a support email address to automatically create Case records in Salesforce.

Step 1 : In Quick Find Box Search Email-To-Case and Click It and Continue.

Step 2 : Click Edit and Enable Email-to-Case and Enable on-Demand Service and Save

Step 3 : Routing Addresses

Routing Name : Support Email Routing

Email : Your Salesforce Email Which You have Signup Save Email Headers : Enabled

Create Task From Email : Enabled

Task Status : Not Started

Case Owner : Select Your Name

Case Priority : Medium

Case Origin : Web

Save it.

Step 4 : Open Your Gmail Check It you will Get Requesting Access Email from Salesforce

Gmail in:sent

MileStone 5 : DATA SECURITY MODEL

The Data Security Model in Salesforce is a framework that controls who can see, access, and modify data in an organization. It ensures that the right users have the

right level of access to records while protecting sensitive information.

Creating the Role Hierarchy

You can build on the existing role hierarchy shown on this page. To insert a new role, click **Add Role**.

Your Organization's Role Hierarchy

[Collapse All](#) [Expand All](#)

To get more licenses, use the Your Account app. [Let's Go](#)

☐ Edit	Sankha_Usha	usank	lakhararekha9123@gmail.com		Tier 1 Support Agent	✓ Standard User

Milestone 6 : Creating Assignment Rule

Ensure that every incoming customer case is automatically routed to the correct support agent or support queue based on defined business rules. This helps reduce response time, balance workload, and improve customer satisfaction.

Why This Milestone Is Important (BA Context)

Without assignment rules:

- Cases may remain unassigned
 - High-priority cases may be delayed
 - Agents may be overloaded while others are idle
 - SLA breaches may occur
- Assignment rules ensure right case → right agent → right time. Objective: Ensure cases are routed correctly. BA Activities

• Define assignment logic:

- Based on Case Type
 - Based on Priority
 - Validate workload distribution
- Deliverable • Case assignment rules document.

Salesforce Setup Page: Case Assignment Rules

Search Setup

Setup Home Object Manager

Case Assignment Rules

Automatically assign cases to users or queues based on criteria you define. You can create multiple rules, but only one rule can be active at a time.

Click a rule name to add or edit rule entries.

Action	Rule Name	Active	Created By	Created On
Rename Del	New Case Assignment	☒	Saniya Lakhara	9/14/2026
Rename Del	Standard	☐	OrgFam EPIC	9/9/2026

Salesforce Setup Page: Queues

Search Setup

Setup Home Object Manager

Queues

Queues allow groups of users to manage a shared workload more effectively. A queue is a location where records can be routed to await processing by a group member. The records remain in the queue until a user accepts them for processing or they are transferred to another queue. You can specify the set of objects that are supported by each queue, as well as the set of users that are allowed to process records from the queue.

View: [All](#) | [Edit](#) | [Create New View](#)

Edit Del	Tier 1 Support	Tier_1_Support		Case	Lakhara, Saniya	9/14/2026, 11:44 PM

Reports And Dashboard

1.Create the Report:

Phase 1: Create the Cases Report

Step 1: Open the Report Builder

1. Click the **Reports** tab in your Salesforce navigation bar.
2. Click **New Report** (top-right corner).

3. Choose **Cases** as the report type and click **Start Report**.

Step 2: Group and Organize the Data

1. In the left panel (*Outline* tab), go to **Group Rows**.
2. Search for and select **Type** to group your cases by categories (Electrical, Structural, Mechanical, etc.).

PNG

Step 3: Add and Filter Columns

1. Under **Columns**, add the following fields: **Case Owner**, **Account Name**, **Subject**, **Date/Time Opened**, **Age**, **Open**, **Closed**, and **Case Origin**.

PNG

2. Go to the **Filters** tab:
 - **Show Me:** All Cases
 - **Created Date:** All Time (or select a specific date range)

Step 4: Add the Chart

1. Click **+ Chart** at the top of the report builder.
2. Click the gear icon (**Chart Properties**) on the right.
3. Select **Donut Chart**.

PNG

4. Set **Value** to **Record Count**.

PNG

Step 5: Save & Run

1. Click **Save & Run**.
2. Name the report: **New Cases Report 1**.
3. Select a folder (e.g., *Public Reports*) and click **Save**.

PNG

Phase 2: Create the Service Dashboard

Step 1: Build the Dashboard Canvas

1. Click the **Dashboards** tab in your top navigation bar.
PNG
2. Click **New Dashboard**.
3. Name it **Service Operations Dashboard** and click **Create**.

Step 2: Add Dashboard Components

1. Click **+ Component**.

2. Select your newly created **New Cases Report 1**.

Phase 2: Create the Service Dashboard

Step 1: Build the Dashboard Canvas

1. Click the **Dashboards** tab in your top navigation bar.
PNG
2. Click **New Dashboard**.
3. Name it **Service Operations Dashboard** and click **Create**.

PNG

3. Add the following visuals from the same report:

- **Component 1 (Donut Chart):** Show *Record Count by Type* to track high-volume issues.
PNG
- **Component 2 (Metric Visual):** Set display to **Metric** to show total active cases (28).
PNG
- **Component 3 (Table Visual):** Show top open cases filtered by **Open = True**.
PNG

Step 3: Arrange and Save

1. Drag and resize the components on the grid for optimal visibility.
2. Click **Save**, then click **Done**.
